Dear Patients and Friends,

Last week I must have been asked 20 times about the new COVID vaccines. Here are my thoughts. Please pass this information onto many as you can. People need to have fully informed consent when it comes to injecting foreign genetic material into their bodies.

1. The COVID vaccines are mRNA vaccines. mRNA vaccines are a completely new type of vaccine. No mRNA vaccine has ever been licensed for human use. In essence, we have absolutely no idea what to expect from this vaccine. We have no idea if it will be effective or safe.
2. Traditional vaccine simply introduce pieces of a virus to stimulate an immune reaction. The new mRNA vaccine is completely different. It actually injects (transfects) molecules of synthetic genetic material from nonhuman sources into our cells. Once in the cells, the genetic material interacts with our transfer RNA (tRNA) to make a foreign protein that supposedly teaches the body to destroy the virus being coded for. Note that these newly created proteins are not rekill any foreign material injected into the body. PEGylated lipid nanoparticles have been used in several different drugs for years. Because of their effect on immune system balance, several studies have shown them to induce allergies and autoimmune diseases. Additionally, PEGylated lipid nanoparticles have been shown to trigger their own immune reactions, and to cause damage to the liver.
4. These new vaccines are additionally contaminated with aluminum, mercury, and possibly formaldehyde. The manufacturers have not yet disclosed what other toxins they contain.
5. Since viruses mutate frequently, the chance of any vaccine working for more than a year is unlikely. That is why the flu vaccine changes every year. Last year's vaccine is no more valuable than last year's newspaper.
6. Absolutely no long term safety studies will have been done to ensure that any of these vaccines don't cause the cancer, seizures, heart disease, allergies, and autoimmune diseases seen with other vaccines. If you ever wanted to be guinea pig for Big Pharma, now is your golden opportunity.

14. Anyone who after reading all this still wants to get injected with the mRNA vaccine, should at the very least have their blood checked for COVID antibodies. There is no need for a vaccine in persons already naturally immunized.

Here's my bottom line: I would much rather get a COVID infection than get a COVID vaccine. That would be safer and more effective. I have had a number of COVID positive flu cases this year. Some were old and had health concerns. ~~Every~~ ^{Single} one has done really well with natural therapies including ozone therapy and IV vitamin C. Just because modern medicine has no effective treatment for viral infections, ~~doesn't mean~~ ^{doesn't mean} that there isn't one.

Sincerely,

Frank Shallenberger, MD, HMD
